Summary

Computer Science student at the University of São Paulo (USP) with a strong background in theoretical logic and full-stack development. My technical foundation is highlighted by a merit award in the Brazilian Informatics Olympiad (OBI), reflecting my expertise in data structures, algorithms, and efficient problem-solving. Experienced in architecting end-to-end applications, utilizing Python, C++, and SQL to build robust, scalable and efficient systems. My professional interests span across Software Development, Cybersecurity, Artificial Intelligence, and Quantum Computing, as I aim to solve complex problems through high-performance computing and innovative engineering.

Education

University of São Paulo (USP) — São Paulo, SP
Bachelor of Computer Science; GPA: 9.2/10.0 — *Mar. 2026 – Dec. 2029 (expected)*

Professional Experience

CodeLabs — São Paulo, SP
Software Engineer — *Jul. 2026 – Present*

- Participated in intensive full-stack development onboarding, implementing end-to-end features using modern web frameworks, relational databases, and clean architecture principles.
- Co-organized an introductory web development course for university students, developing instructional materials and delivering a lecture on FastAPI fundamentals.

IMEsec — São Paulo, SP
Web Security & Communications Member — *Abr. 2026 – Present*

- Studied and demonstrated web exploitation techniques and defensive countermeasures, focusing on common vulnerabilities and application security standards.
- Designed visual assets and promotional media for group initiatives, increasing technical outreach and community engagement across institutional channels.

Personal Projects

EstudAí – Gamified, competitive study platform — Brasília, DF
Full-Stack developer — *Mar. 2025 – Apr. 2026*

- Built a web platform with a timer to track user study sessions, a dashboard providing insights into user progress, and a social system enabling users to compare and assist each other.
- Designed the backend in Flask with an HTML and Jinja frontend, including an event-driven communication system using WebSockets and AJAX to achieve real time updates.
- Hosted on Oracle Cloud VMs, the website reached 100+ users and it was decisive in the admission of many to higher education.

Quórum – Personal finance application — São Paulo, SP
Full-Stack developer — *Feb. 2026 – Jul. 2026*

- Built a local-first personal finance application for Android and Windows, featuring offline-first expense tracking, custom budgeting categories, and visual financial analytics.
- Developed the app using Flutter and Dart with SQLite for local storage, integrating Open Finance APIs to automatically import user expenses.
- Engineered an encrypted backup and synchronization pipeline via Google Drive API, enabling seamless cross-device data consistency while preserving user data ownership without centralized servers.

Skills

Languages: Python, C, C++, SQL, JavaScript, Flutter/Dart
Technologies: FastAPI, Flask, MySQL/PostgreSQL, Docker, Git, WebSocket, Linux

Languages

Portuguese (native), English (C1)
